

Vishwas Paranjpe

Vishwas has over 37 years of experience in IT spanning hardware, systems, application software solutions and product development. Vishwas is an Industrial Electronics Engineer and had further studied PGD in advance system analysis and software systems.

His experience includes software development & implementation, independent testing for medium to very large systems design, development and implementation projects in Retail & Development Banking, Pharmaceuticals, Power Distribution Utilities, Healthcare, Oil & Petrochemicals, Railways, Defense Labs and Manufacturing / Production units. He has also designed and developed embedded, SCADA and complex algorithmic systems.

The experience Vishwas has ranges from requirements gathering to analysis, solution architecting and design, development and implementation as well as post implementation support for next few years. This has helped him gain deep insights into almost all aspects of software products, projects and services and the associated knowledge and skills to successfully complete the projects in time and budgets.

Vishwas has developed and fine tuned his skills in growing and managing large teams of professionals to evolve and mature into highly competent professionals. He had been an ardent supporter of the processes and methodologies adherence, refining those to deliver projects more efficiently and effectively and work towards lean methods. His team building and leading skills had provided effective results.

He has been associated as a committee member in institutions like Life Insurance Corp. of India, Industrial Development Bank of India, Defense units, etc., taking care of areas ranging from establishing and validating the need for system to solution architecting leading to vendor selection and award of IT contracts - hardware, Networking, Software products and application development and maintenance services.

Vishwas has worked for large companies like IBM World Trade Corporation, CMC and technology companies like Kale Consultants, SRA & Disha Technologies (which was taken over by Aztecsoft later). It was at CMC that provided opportunities in learning and refining skills in Business solution architecting, design and deployment of large integrated systems in development and retail banking, Defense, transport and in enterprise areas. In SRA it was more of products and services in Pharmaceutical and Manufacturing while at Kale Consultants it was Banking & Healthcare where new generation products were designed, developed and marketed and implemented.

He has been consulting to SME's on number of areas in addition to assisting in product / project conceptualization, development and implementation, IV&V, Test Automation,

etc. His last assignment in consulting was to establish a centre of excellence (CoE) for a world's third largest stock exchange.

Areas of Specialization:

- Software Products & Application Development for a variety of Industry verticals
- Project management / Program Management
- Quality Management / TQM
- Operations Management
- Product Development (Concept to Delivery)
